

# INVESTIGATION TIMELINE

## JANUARY 14, 2019 ANNOUNCEMENT

Mount Carmel reported to authorities, including law enforcement, the results of an internal investigation that determined Dr. Husel ordered significantly excessive and potentially fatal doses of pain medication for at least 27 patients who were near death and receiving intensive care. These patients' families had requested that all life-saving treatment be stopped, yet the amount of medicine ordered was more than what was needed to provide comfort.

## What we know about the investigation as of January 24, 2019.

*Based on what we've learned about this report, we should've begun a more expedited process to investigate and consider immediate removal of Dr. Husel from patient care at that time.*

*Three patients died between October 25, 2018 and November 21, 2018.*
